

WHAT DOES 95% MEAN FOR N95 MASKS?

** Masks, Social Distancing, & Lockdowns can only Flatten-The-Curve, not End-The-Curve*

(1) It means, for the sake of simplicity, that for every 20 minutes you wear a mask, one (1) minute will be like NOT wearing a mask.

(2) Now, what about those Blue Surgical Masks? Well, those are not n95 masks and at best like, an n70 or n50 masks as a lot of the air escape out the sides with each breath your take. *That means for every 10 minutes you wear a blue surgical mask, three (3) to five (5) of those ten (10) minutes will be like not wearing a mask.*

(3) - Hence, so-called famous TV scientists like Bill Nye trying to blow out a candle with a mask on to show the effectiveness of a mask is 100% misleading as when Bill Nye attempts to blow out a candle and cannot, a lot of the air has to escape out the SIDES / EDGES of the masks and virus particles float in the air all around him, instead of in front of him.

(4) - So why do medical staff wear those blue surgical masks? It was never to prevent the flu. It was only to reduce the amount of fine SALIVA and SPIT particles from landing on a patient in surgery. Hence the name "surgical" mask, not virus prevention masks.
