

Did Christopher Columbus discover America? Or, was it the Bahama Islands?

Some will say Columbus never reached America, but that is a Geographic Revisionist Technicality as number one, there were no maps of North America back then in Europe. Furthermore, Columbus at least showed there was land, the Bahama Islands, on the other side of the Atlantic Ocean. This, as opposed to the Atlantic Ocean and Pacific Ocean being, one and the same, ocean.

Furthermore, those Bahama Islands are part of the North American continent, not South America, or Europe, or Asia, or Australia, or Antarctica.

Those who say Columbus only discovered the Bahama Islands should realize those islands actually had no name back then in 1,492. And those Bahama Islands, were, and still are, part of the Americas. Hence, Columbus did discover America.
